Student Name: Kym Niecoole R. Jabican
Group: NeOS
Assigned Role: Student 6 – Technical Documentation

1. What did I contribute to the project?
I contributed to the project by preparing the technical documentation of MiniOS. I explained the system architecture, program structure, and the functions of file, process, memory, and user management.

2. What features did I personally develop?
My main contribution was documenting how the different MiniOS features work, including file management, process management, memory management, user login, and error handling.

3. What problems did I encounter?
I had difficulty understanding some system operations and explaining the technical details clearly and accurately in the documentation.

4. How did I solve those problems?
I reviewed the project structure, studied the purpose of each component, and organized the information into simple explanations to make the documentation easier to understand.

5. What did I learn from this project?
I learned how an operating system works through a simulation, the importance of clear technical documentation, and how teamwork helps complete a programming project.

6. Evidence of my contribution:
My evidence includes the MiniOS technical documentation, system architecture diagram, program structure, and written explanations of the system's features and operations.
