Individual Contribution Report

Student Name: Daphnie Claire Montalban

Group: neOS

Assigned Role: Student 3

File Management Developer

1.What did I contribute to the project?

I developed the core file management module for our project, allowing users to interact directly with the file system.

2. What features did I personally develop?

Dir: Listed directory contents.

Mkdir: Created new directories.

Create: Generated new files.

Read: Read and displayed file contents.

Delete: Safely removed files and directories.

3. What problems did I encounter?

Program crashes when attempting to read or delete files that did not exist.

Permission errors and file lock issues when removing or editing active files.

4. How did I solve those problems?

Added pre-execution file existence checks and try-catch error handling to prevent system crashes.

Handled stream disposal properly to release file locks before deletion.

5. What did I learn from this project?

How to programmatically handle file I/O operations and directory navigation.

The importance of robust error handling to keep the application running smoothly.
